

ZENITHMIND ELITE

Quick Start Guide

One Person. One Machine. One Complete Business System.

For: ZenithMind Elite Members

Runs on: Claude Code — the Code tab in your Claude app

Setup time: ~5 minutes (after ZenithMind OS is complete)

ZenithMind Elite is a **complete AI-powered business system** — 13 tools that read directly from the profile you built in ZenithMind OS. **Elite includes everything in Plus** — you only need this package.

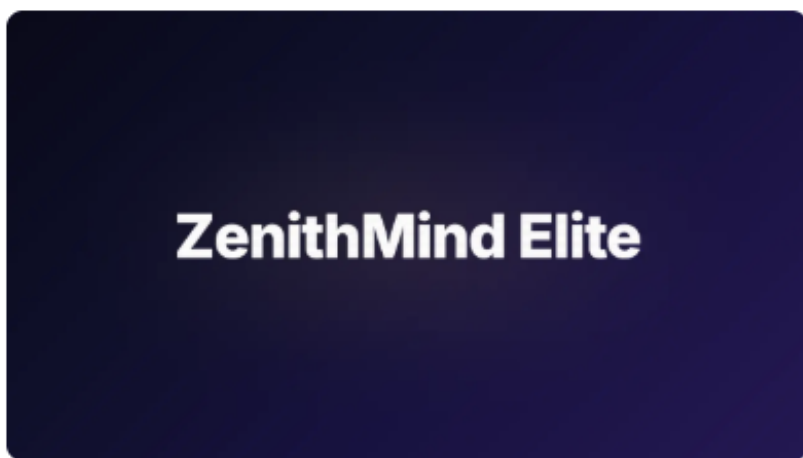

Did you do ZenithMind through ChatGPT? All your data comes with you. Head to **zenithpro.io**, navigate to **ZenithMind OS 2026**, and check the **ChatGPT Migration** section in the Start Here tab. If not and you're a first-time user (which most of you are), just continue on.

First question: Have you completed ZenithMind OS? Every Elite tool runs on your profile data. If not — go to **zenithpro.io**, log in, click **ZenithMind OS 2026**, download the **Code** version. Complete it first, then come back.

Yes — I've completed ZenithMind OS

If you completed ZenithMind OS in Claude Code, your profile data is already there. You just need to add your Elite tools.

- 1 **Log in to zenithpro.io** and find the **ZenithMind Elite** card. Click **Start Here**, then walk through the modules if you haven't yet. **Modules 4 and 5 have your Elite skills.** As an Elite member, your Plus skills are included — everything is in one place.

ZenithMind Elite

- 2 **Open Claude Code** and tell it:

```
"I downloaded my ZenithMind Elite Skills and the zip is in my Downloads. Set it up."
```

Claude handles the rest — extracts the zip, installs the tools, and confirms everything is ready.

- 3 **Start with Personal Brand DNA Extractor** — follow the path on Pages 4-5.

Not yet — I haven't completed ZenithMind OS

These tools run entirely on your profile data — without it, there's nothing to power them. Your Scorecard, Signature Profile, and Personal Instruction Manual are the engine that drives every one of these 13 tools. Complete the base program first.

Step 1: Go to **zenithhub.ai** and select **ZenithMind OS** from "Choose Your Program." This walks you through getting Claude Code and Obsidian set up on your computer.

Step 2: Go to **zenithpro.io**, log in, and find the **ZenithMind OS 2026** card. Download the **Code** version.

Step 3: Complete all 4 lessons — it takes a few focused sessions. Then come back to this guide and pick up on Page 2.

NEED HELP?

Visit **zenithhub.ai** and select **ZenithMind Elite** from "Choose Your Program" for setup help and troubleshooting.

If you need additional help, email **mail@strategicprofits.com**. Don't spend more than 15 minutes on an error — that's what support is for.

You have 13 tools. That's a complete business system — but running them in the wrong order wastes what they can do. **Follow this path.** Each phase builds on the last. Each tool's output makes the next one sharper.

Four phases, in order. Phase 1 builds your brand foundation. Phase 2 maps your market. Phase 3 extracts your IP. Phase 4 deploys everything. Plus tools you run whenever you need them.

PHASE 1 Brand Foundation — Who You Are and How You Sound

1 Personal Brand DNA Extractor

Reads your existing materials — courses, emails, calls, testimonials — and extracts 8 data files: voice, credentials, transformations, origin story, philosophy, avatar. **Start here. Everything downstream feeds off this.**

PHASE 2 Market — Who You Serve and What's Blocking You

2 Client Compass

Maps your ideal client at a psychological level — beliefs, struggles, exact language, screening criteria. Produces a Client Compass Card for discovery calls.

3 Theory of Constraints

15-minute diagnostic that identifies the specific bottleneck in your business — not a category, the real thing. Delivers 3 concrete moves for this week.

4 Constraint Portfolio

Calculates throughput-per-founder-hour for every product and ranks your full portfolio. Reveals which products are your best and worst time investments.

PHASE 3 IP — Extract and Package What You Know

5 Distinction System

Surfaces the insights buried in your content, builds each into a complete teaching unit, and generates the quotable one-liner that makes it portable.

6 Framework Forge

Mines your content for the repeatable methodologies you run instinctively. Builds them into named frameworks with complete supporting materials.

7 Mechanism Ideator

Generates mechanism candidates for your offers, scores them against surprise/credibility/resonance/differentiation, and builds research packages with proof.

PHASE 4 Deploy — Put Everything to Work

8 Content Forge

Produces 30 days of ready-to-post content in your voice — posts, emails, video scripts — multiplied into 50-80+ derivative pieces with a weekly workflow system.

9 Prospect Primer

Builds a prospect-facing assessment that runs on your website or as a lead magnet. Prospects score themselves and arrive at your calls already sold.

10 Copywriting Arena

Runs your brief through 5 proven copywriting methodologies simultaneously. Critics evaluate every draft, a marketplace judge picks a winner, and a synthesis combines the strongest elements.

11 Webinar Arena

Writes 6 complete webinars from one brief using different proven structures. Critics evaluate, a marketplace judge picks a winner, and a synthesis pulls the best into one unified presentation.

By the time you finish Phase 4, you have: your brand DNA extracted, your market mapped, your bottleneck identified, your IP packaged, your content running, your lead magnet deployed, your sales copy written, and your webinar built. **One person, one machine, one complete business system.**

USE ANYTIME

Deep Research

Sends one question to 9 sources simultaneously. One coherent report in minutes. Run before any major decision.

Strategic Builder

8-phase project lifecycle from scoping through archiving. Use at the start of any major build.

You can run any tool at any time — the path above is the recommended order, not a locked sequence. But if you follow it, each phase's output compounds into the next. The system gets more powerful as you go.

HOW IT WORKS

Each tool produces output — PDF reports, deployable documents, complete frameworks — all saved to your ZenithMind folder on your computer. Your data stays local. Run any tool as many times as you want with different inputs, briefs, or contexts.
