

ZENITHMIND OS

# Quick Start Guide

Two Paths. One System. One App.

---

**For:** ZenithMind OS Members

**Path A:** Code tab in Claude app — the full experience

**Path B:** Cowork tab in Claude app — limited functionality

**Both paths:** Same 62 exercises, same AI mirror, same \$20/month

# Welcome to ZenithMind OS

PAGE 2

**Two sites, two jobs:** **zenithpro.io** is your course portal — Rich's videos, downloads, and course content. **zenithhub.ai** walks you through getting Claude and Obsidian set up.

ZenithMind OS is an AI system created by Rich Schefren. You talk to Claude (an AI), and it gets to know you — how you think, what drives you, what holds you back, and what patterns you can't see. **Your only job:** show up and answer honestly. 62 exercises across 4 modules, all guided like a conversation.

**Did you do ZenithMind through ChatGPT?** All your data comes with you. Head to **zenithpro.io**, navigate to **ZenithMind OS 2026**, and check the **ChatGPT Migration** section in the Start Here tab. If not and you're a first-time user (which most of you are), just continue on.

**First:** Go to **zenithhub.ai** and select **ZenithMind OS** from "Choose Your Program." It walks you through getting Claude and Obsidian set up. **This is required for Path A** — and we strongly recommend Path A. Path B works, but you'll miss file visibility, Obsidian integration, and Plus/Elite compatibility. If you can spend 5 extra minutes, go with Code.

## PICK YOUR PATH — BOTH USE THE SAME CLAUDE APP

### RECOMMENDED

#### Path A: Code Tab

Open the Claude app, click **Code**, and tell Claude where your zip is. Claude extracts it, sets everything up, and starts Module 1.

**Required for Plus and Elite.**

~5 minutes to set up

### LIMITED

#### Path B: Cowork Tab

Open the Claude app, click **Cowork**, open your ZenithMind folder, and start talking. No technical setup needed — but no file visibility, no Obsidian integration, and **can't run Plus or Elite skills.**

~5 minutes to set up

**Our recommendation:** Go with Path A. Claude Code can build things for you — tools, reports, automations — not just talk. You see every file it creates in real time. **If you purchased Plus or Elite, Path A is required** — those skills only run in Claude Code. If you can spend 5 extra minutes on setup, **Code is the better experience. You won't regret it.**

### WHAT YOU'LL NEED

A computer with internet · an email address · a credit/debit card (**Claude Pro \$20/month**, cancel anytime) · willingness to be honest. *Rich recommends **Wispr Flow** (wisprflow.ai) — turns your voice into text.*

### HOW THE PORTAL AND CLAUDE WORK TOGETHER

Watch Rich's video on the portal first — he explains *why* the module matters. Then come to Claude and do the exercises. Portal gives you the thinking, Claude gives you the experience.

# Path A: Code Tab

GETTING STARTED — TAKES ABOUT 5 MINUTES

If you completed [zenithhub.ai](https://zenithhub.ai), you already have the Claude app, Obsidian, and the integration set up. This is just the ZenithMind-specific part — download your folder and start. (On [zenithhub.ai](https://zenithhub.ai), make sure you selected **ZenithMind OS** from "Choose Your Program" at the top.)

- 1 **Download the ZenithMind zip** — Go to [zenithpro.io](https://zenithpro.io), find the **ZenithMind OS 2026** card, and click the **Code** download button. A file named **ZenithMind-OS-Code.zip** downloads to your computer. **Don't unzip it** — Claude will handle that for you.
- 2 **Open Claude Code and tell it where your zip is** — If you set up the Obsidian plugin from [zenithhub.ai](https://zenithhub.ai) Part 4 (**Rich recommends this**), open Obsidian and launch a Claude Code terminal panel. Otherwise, open the Claude app and click the **Code tab**. Either way, tell Claude:

```
"I downloaded ZenithMind OS and the zip is in my Downloads. Set it up and let's start."
```

Claude finds the zip, extracts it, runs setup, and starts Module 1. That's it.

**You should see:** Claude greeting you and asking its first question. If you see this, setup is complete. Everything from here is just having a conversation.

## How It Works

**Your folder is Claude's memory.** Everything saves automatically. Claude reads your files each session so it always knows where you left off. To resume, say "**Let's continue ZenithMind.**" Lesson transitions are automatic.

**Purchased ZenithMind Plus or Elite?** Start with the OS setup above — that's your foundation. Plus includes professional positioning tools, Elite includes a complete AI-powered business system. Both run on the profile you build here.

**Elite includes everything in Plus.**

Download your upgrade from [zenithpro.io](https://zenithpro.io). Claude will walk you through everything when you're ready.

**Need help?** Visit [zenithhub.ai](https://zenithhub.ai) for setup help, or email [mail@strategicprofits.com](mailto:mail@strategicprofits.com).

Cowork works — but it's limited. No file visibility, no Obsidian integration, no Plus or Elite skills. When you're ready, moving to **Code (Path A)** gives you the full experience — and Claude brings all your Cowork progress over automatically. **Nothing restarts, nothing is lost.** If you can, just start with Code.

## FOLLOW THESE STEPS IN ORDER — TAKES ABOUT 5 MINUTES

- 1 **Download the Claude app** — Go to [claude.ai/download](https://claude.ai/download) and install it. Mac: drag to Applications. Windows: double-click and install.
- 2 **Sign in or create an account** — Open the app. Already have a Claude account? Click **"Sign In."** New? Click **"Sign Up"**, enter your email, create a password (**write it down**), and verify your email. Then subscribe to **Pro (\$20/month)** via the **"Upgrade"** button.
- 3 **Download your ZenithMind folder** — Go to [zenithpro.io](https://zenithpro.io), find the **ZenithMind OS 2026** card, click **Cowork** download. Unzip it (Mac: double-click the .zip; Windows: right-click → Extract All) and drag the **ZenithMind-OS-Cowork** folder to your **Desktop**.
- 4 **Open your folder in Claude** — Click the **Cowork tab** at the top. Look for **"Work in a Folder"** and check it. Select **ZenithMind-OS-Cowork** from your Desktop. When Claude asks for permission, click **"Always Allow."**
- 5 **Type "Let's start" and press Enter** — Claude reads your folder, recognizes ZenithMind OS, and begins guiding you through Module 1. You're in.

**You should see:** Claude greeting you and asking its first question. If you see this, setup is complete.

## HOW IT WORKS

**Your folder is Claude's memory.** Everything saves automatically. Claude reads your files at the start of each session so it always knows where you left off. Your data lives on your computer, not in the cloud.

**To pick up where you left off:** Open the Claude app → Cowork tab → select your folder → type **"Let's continue."** Taking a break? Just close the app — everything is saved, Claude knows exactly where you are.

**Purchased ZenithMind Plus or Elite?** Complete the base program here, then switch to **Code (Path A)** — Plus and Elite skills require it. Download the **Code** version from [zenithpro.io](https://zenithpro.io) and follow **Page 2**. Setup detects your Cowork progress and brings everything over automatically.

**Need help?** Visit [zenithpro.io](https://zenithpro.io) for support and troubleshooting.
